

WATER REFILLING STATIONS

WATER REFILLING STATIONS

AWARD WINNING REFILL STATIONS

Developed under guidance from the UK Water Industry

FREE HYDRATION

Offering free chilled & filtered mains-fed drinking water in high footfall locations.

ERADICATING SINGLE-USE PLASTIC

A practical refilling alternative to disposable bottled water and the damage caused to the environment.

SELF-FINANCING

From refillable bottle sales and advertising revenue.

HYGIENIC TECHNOLOGY

Proprietary dispensing technology which eliminates contact contamination.

The first to offer commuters year-round free drinking water at Transport for London (Hammersmith) and London River Services.

THE CHALLENGE

- Over 3 billion litres of bottled water now consumed annually (up from 30 million litres in 1980)
- Over 25% of UK bottled water imported
- Mostly in single use non-returnable plastic bottles
- Consumers desire easier, greener, FREE access for their refillable bottles.

THE OPPORTUNITY

- Create a network of water refilling stations to improve public access to free, hygienic, chilled water
- Self-financing by refillable bottle sales and advertising revenue
- Reducing the waste & damage created by single use plastic water bottles
- Supporting the carbon energy efficiency of mains-fed delivery
- Promoting the quality of UK tap water, already among the highest in the world.

Pioneering commuter provision TfL Hammersmith

One million bottle refills, Northumbria University

Situational versatility, full hygiene security

Networked media screen iterations
